

CONSUMER CONFIDENCE REPORT

VILLAGE OF METCALF PWS **IL0450250**

METCALF WATER DEPARTMENT

ANNUAL WATER QUALITY REPORT FOR THE PERIOD OF JANUARY 1 TO DECEMBER 31, 2024

This report is intended to provide you with important information about your drinking water and the efforts made by the water system to provide you with safe drinking

water. For information regarding this report, contact: "Operator in Responsible Charge"

RYAN BYERLEY

(217) 202-1235

or our "CITY CLERK" at

(217)264-0809

You may also visit us during regular business hours Monday, Tuesday, Thursday, and Friday 9:00 to 5:00

BOX 77

Metcalfe, IL 61940

OUR VISION is to Deliver Quality Drinking Water at Affordable Rates to the residents of

METCALF WATER DEPARTMENT

OUR MISSION to Monitor Water Quality within our Community and provide Dependable Delivery and Maintain the Integrity of the System

Este informe contiene informacion muy importante sobre el agua que usted bebe. Traduzcalo o hable conalguien que lo entien que entienda bien.

SOURCES OF DRINKING WATER

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and travels over the surface of the land or through the wells. As water travels through the ground, it dissolves naturally occurring minerals and , in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include: Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agriculture livestock operations, and wildlife.

Inorganic contaminants , such as salts and metals, which can be naturally occurring or result from urban storm water runoff, industrial and domestic wastewater discharges, oiland gas production, mining, or farming.

Pesticides and Herbicides , which may come from a variety of sources such as agriculture, urban urban storm water runoff, and residential uses.

Organic Chemical Contaminants , including synthetic and volatile organic chemicals, which are by-products of induetrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.

Radioactive Contaminants , which can be naturally occurring or be the result of oil and gas production and mining activities

IMPORTANT HEALTH INFORMATION

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at (800) 426-4791.

In order to insure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health. Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/CDC (Center for Disease Control and Prevention) guidelines on appropriate means to lesson the risk of infection by Cryptosporidium and othe microbial contaminants are available from the Safe Drinking Water Hotline (800) 426-4791.

SOURCE WATER ASSESSMENT

We want our valued customers to be informed about their water quality. If you would like to learn more, please feel welcome to attend any of our regularly scheduled meetings. The source water assessment for our supply has been completed by the Illinois EPA. If you would like a copy of this information, please contact your City Hall or our water operator at (217) 202-1235. To view a summery version of the completed Source Water Assessment, including: Importance of Source Water: Susceptability to Contamination Determination: documentation/recommendation of Source Water Protection Efforts, you may access the Illinois EPA website at <http://www.epa.state.il.us/cgi-bin/wp/swap-fact-sheets.pl> .

VILLAGE OF METCALF PWS TREATS GROUND WATER FROM 2 WELLS LOCATED IN THE SURROUNDING AREA

The Village of Metcalf presently draws water from WELL 2 and WELL 3 Located Approximately 50 feet west of the water plant

SOURCE WATER ASSESSMENT: To determine Metcalf's susceptibility to groundwater contamination, a Well Site Survey, published in 1990 by the Illinois EPA, and the Source Water Protection Program completed by the facility, were reviewed. Based on the information contained in this document, five potential sources of groundwater contamination are present that could pose a hazard to groundwater pumped by the Metcalf community water supply wells. These include two above ground petroleum storages, two below ground petroleum storages, and a grain elevator. Information received from the village indicated that the storage tanks at map code number 07721 (below ground petroleum storage) and number 07722 (above ground petroleum storage) have been removed. The Illinois EPA has determined that the village of Metcalf's Well #1 are not susceptible to IOC, VOC, or SOC contamination. This determination is based on a number of criteria including: monitoring conducted at the well; monitoring conducted at the entry point to the distribution system; and the available hydrogeologic data for the wells.

In 2021, our PWS was sampled as a part of the State of Illinois PFAS Statewide Investigation. Eighteen PFAS compounds were sampled, and none were detected in our finished drinking water. For more information about PFAS health advisories <https://www2.illinois.gov/epa/topics/water-quality/pfas/Pages/pfas-healthadvisory.aspx>

LEAD AND COPPER LEAD can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The drinking water supplier is responsible for providing high quality drinking water and removing lead pipes, but cannot control the variety of materials used in plumbing components in your home. You share the responsibility for protecting yourself and your family from the lead in your home plumbing. You can take responsibility by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Before drinking tap water, flush your pipes for several minutes by running your tap, taking a shower, doing laundry or a load of dishes. You can also use a filter certified by an American National Standard Institute accredited certifier to reduce lead in drinking water. If you are concerned about lead in your water, you may wish to have your water tested, contact Village Hall at (217)264-0809. Information about lead in drinking water, testing methods, and steps you can take to minimize exposure is available at <http://www.epa.gov/safewater/lead>.

Definitions:

Action Level Goal (ALG): The level of a contaminant below which there is no known or expected risk to health. ALGs allow for a margin of safety.

Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow

Copper Range: 6.5 to 570 ppb

Lead Range: 0 to 1 ppb

To obtain a copy of the water system's lead tap sampling data: contact Village Hall (217)264-0809

Our Community Water Supply has developed a service line material inventory. To obtain a copy of the system's service line inventory: contact Village Hall (217)264-0809

2024		REGULATED CONTAMINANTS DETECTED BY				VILLAGE OF METCALF PWS		
Lead and Copper	Collection Date	MCLG	Action Level (AL)	90th Percentile	# Sites Over AL	Units	Violation	Likely Source of Contamination
Copper	2024	1.3	1.3	0.36	0	ppm	N	Erosion of natural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems
Lead	2024	0	15	1	0	ppb	N	Erosion of natural deposits; Corrosion of household plumbing systems
Disinfectants and Disinfectant By-Products	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Chlorine	2024	0.7	0.49 - 1	MRDLG = 4	MRDL = 4	ppm	N	Water Additive Used To Control Microbes
Haloacetic Acids (HAA5)	2022	14.9	14.9 - 14.9	No Goal For The Total	60	ppb	N	By-Product of drinking water disinfection.
Total Trihalomethanes (TTHM)	2022	10.57	10.57 - 10.57	No Goal For The Total	80	ppb	N	By-Product of drinking water disinfection.

Water Quality Test Results

In **2024** **VILLAGE OF METCALF PWS** conducted extensive monitoring to insure that your water meets or exceeds all water quality standards.

The results of our combined monitoring are reported in the following data tables. While most monitoring was conducted this last calendar year, certain substances are monitored less than once per year because the levels do not change frequently. For help with interpreting these tables, see the Tables Definition section below.

TABLE DEFINITIONS AND ABBREVIATIONS

Avg:	The following tables contain scientific terms and measures, some of which may require explanation.
Level 1 Assessment	Regulatory compliance with some MCLs are based on running annual average of monthly samples. A Level 1 Assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.
Level 2 Assessment	A Level 2 Assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E. Coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.
Maximum Contaminant Level or MCL:	The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
Maximum Contaminant Level Goal or MCLG:	The level of a contaminant in drinking water below which there is no known expected risk to health. MCLGs allow for a margin of safety.
Maximum Residual Disinfectant Level or MRDL:	The highest level of disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
Maximum Residual Disinfectant Level Goal or MRDLG:	The level of drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
na:	not applicable.
mrem:	millirems per year (a measure of radiation absorbed by the body)
ppb:	micrograms per liter or parts per billion - or one ounce in 7,350,000 gallons of water.
ppm:	milligrams per liter or parts per million - or one ounce in 7,350 gallons of water.
Treatment Technique or TT:	A required process intended to reduce the level of a contaminant in drinking water.

2024

REGULATED CONTAMINANTS DETECTED LEAVING THE WATER TREATMENT PLANT BY

METCALF WATER DEPARTMENT

Inorganic Contaminants	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Arsenic	4/17/2018	1.4	1.4 - 1.4	0	10	ppb	N	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes.
Barium	2024	0.24	0.24 - 0.24	2	2	ppm	N	Discharge from drilling waste; Discharge from metal refineries; Erosion of natural deposits.
Fluoride	2024	0.724	0.724 - 0.724	4	4	ppm	N	Erosion of natural deposits; Water additive that promotes strong teeth; Discharge from fertilizer and aluminum factories
Iron	2024	0.47	0.47 - 0.47		1	ppm	N	Not currently regulated by USEPA. However, the state regulates it. Erosion of natural deposits.
Sodium	2024	110	110 - 110			ppm	N	Erosion from naturally occurring deposits; Used in water softener regeneration
Manganese	2024	120	120 - 120	150	150	ppb	N	Not currently regulated by USEPA. However, the state regulates it. Erosion of natural deposits.
Nitrate (measured as Nitrogen)	2024	0.06	0.06 - 0.06	10	10	ppm	N	Runoff from fertilizer use; Leaching from septic tanks; Erosion of natural deposits
ZINC	2024	0.018	0.018 - 0.018	5	5	ppm	N	This contaminant is not currently regulated by the USEPA. However the State regulates. Naturally occurring; Discharge from metal.
Radioactive Contaminants	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Combined Radium 226/228	11/8/2022	1.88	1.88 - 1.88	0	5	pCi/L	N	Erosion of natural deposits.
Gross alpha excluding radon and uranium	11/8/2022	4.09	4.09 - 4.09	0	15	pCi/L	N	Erosion of natural deposits.

The State requires monitoring of certain contaminants less than once per year because the concentration of these contaminants do not change frequently. Therefore some of the data in the tables above, though accurate, may be more than one year old.

The VILLAGE OF METCALF PWS is PROUD to announce that we received 0 Violations for the year 2024
